committee said.

"Late reports show that cattle slaughterings during the first four months of 1944 are 17 percent below the number which should have been slaughtered to fill war needs for meat and decrease numbers to a safe relationship with feed supplies."

"This means that marketing during the next two or three months will need to be increased very materially if the 32,000,000 to 35,000,000-head slaughter goal for 1944 is to be reached, especially without bringing about a disastrous jam of shipping, marketing and slaughtering facilities."

Triple-A committees are urging farmers and ranchers to watch the progress of feed crops and pasture conditions closely as well as the conditions of the market this summer, and to adopt a policy of liquidating stock for which definite feed supplies are not in sight or whenever they reach marketable condition.

HEY! FARMERS!

HOW TO SALT HAY

Use an adequate amount and distribute the salt evenly throughout the load. Place the hay in the stack or mow in layers 12 or 15 inches thick, and apply salt liberally after each leveling with the hayfork or sling.

AMOUNT OF SALT TO USE

(Clip this out and save for future reference.)

Call at our office for complete information.)

The following table is recommended as a guide for the amount of salt to be used. Note that in all cases more salt is necessary in wet weather than in dry.

KIND OF HAY	Pounds of Salt per ton in Wet Weather	Pounds of Salt per ton in Dry Weather
Alfalfa	9	5
Clover	10	5
Timothy	6	3
Prairie Hay	8	3
Red Top	7	3
Soybean	10	5
Ensilage	6 lbs. to each ton of forage	
STRAW		
Wheat Straw	7	3
Oat Straw	9	5
Bailey Straw	10	5
Rye Straw	8	4

Follow the above table regardless of whether your hay is stacked, stored in hay mow or baled.
