

WEEKLY NEWS OF FRUITLAND

(Mrs. G. C. McGee, correspondent) Fire At Amick's Place

A fire which was started about 2:30 Monday afternoon when a stubble field which Earl Amick was burning preparatory to seeding clover, got out of control. A huge strawstack, hog-house, hay derrick and about 25 or more tons of hay were burned. Neighbors, the street sprinkler from Payette, and fire engine from Ontario all responded the line calls. At 4:00 o'clock Tuesday the hay was still burning. The hay and houses were covered by insurance.

Glenn Smith Leaves

Glenn R. Smith, 3 1/2 left Monday for San Francisco after spending his two weeks leave with the C. A. Teamsters.

At Hazard Lake

HOP PICKERS

EARLY AND LATE HOPS

Picking will start between Sept. 5th and 10th.

Good wages. Inquire at 665 1st St. N. W. Ontario, or one mile S. of Stoner Packing Plant.

V. O. KELLY HOP FARM

the help of live decoys, as urged by some hunters.

Dr. Ira N. Gabrielson, fish and wildlife director, said the more liberal regulations were due to the steady increase in the continental migratory game bird population. He said the increase in mallards, widgeons and pintails has been "notable" and since they are the species which do the most damage to crops, hunters will be allowed to shoot more of them.

This is "purely a temporary expedient" to help farmers, he said, and will not be continued beyond this season unless crop protection again makes it necessary.

Open season on ducks in Idaho extends from October 14 to January 1, both dates inclusive.

Stay Edible

Some crops, like peppers and eggplants, remain in good edible condition for some time. Sweet peppers usually turn yellow and red after a while. Some gardeners prefer them at this stage, especially for pickling.

Overloads Combine

Too fast tractor speed overloads the combine and wastes grain. If cylinder speed in the threshing mechanism is too fast, straw is broken too fine and carries off some grain. Straw rack speed must also be controlled to prevent waste. If the fan is adjusted to blow all chaff from the grain to make it absolutely clean, many light kernels will be blown out also.

Makes Driver Dangerous

Most serious of all is the influence of liquor on a driver's attitude. It tends to make the driver cocky, overconfident and careless. He will take chances he'd never dream of taking when sober.

Versatile Fish

The flying gurnard swims in the ocean, glides through the air and walks on the sea floor on specially developed forefins.

SEED GROWERS

Profits for every field and garden seed grower in this area have been increased during the past five years, due to our co-operative marketing. Following are a number of ways in which our organized selling brings more money for your crops at less cost to every seed grower:

1. Under the co-operative marketing policy, the profit, which normally goes to the private seed house is returned to the grower in patronage dividends.
2. Our co-operatively owned cleaning plant which is one of the best equipped in the west offers the grower the advantage of seed processing at minimum cost. A detailed test is made on each individual lot, and a complete report furnished the grower. This will be of assistance in obtaining incentive payments with the AAA for eligible growers.
3. Cash advances, based on current market price, can be obtained after your seed is cleaned at the plant, and under marketing agreement. This eliminates the need for outside financing or borrowing while your crop is being marketed, and makes it unnecessary to sell to price-cutting buyers for quick cash.
4. We market peas and beans for the grower.

We also buy field seeds for cash on recleaned basis. See us for your fall seeding needs.

Our Plant Includes--

Latest equipment for the processing and polishing of beans.

Complete units for best possible quality cleaning of field seeds.

New equipment to process and clean most garden seeds.

Fumigation and processing equipment for Austrian and dry edible peas.

Seed laboratory — the only such service in eastern Oregon speeds up analyzing and testing of seed samples.

If you are a seed grower and not a member of a Pacific Supply Co-operative Association, it will pay you well to investigate the additional profits awaiting you. See your closest Co-op Unit at Weiser, Emmett, New Plymouth, Ontario, Vale or Nyssa.

Goofy, am I?

Go ahead—that's your privilege—thinking I'm just plain hipped on everlastingly keeping this engine's insides OIL-PLATED with Conoco Nth oil. Maybe there is and maybe there isn't sixty other ways that would have kept engine acids from raising Ned with this pre-Pearl Harbor limousine. But one thing I know is this: it's still running swell on nothing but Conoco Nth motor oil. You needn't be a scientist to know that acids from every explosion are forever trying to spoil an engine. Looks like the proper idea is to try blocking those acids by getting your engine OIL-PLATED. I learned there's a modern synthetic in Conoco Nth oil that reminds you of magnetism, because it makes inside surfaces attract a shield of OIL-PLATING. Acids can't so easily tear right into this. Then your OIL-PLATED engine has an extra chance to last you. When new cars arrive, hurrah! But a real advanced improvement right now is to switch to Conoco Nth motor oil, see.

CONOCO Nth MOTOR OIL
